TBBF type high-voltage shunt capacitor installations are usually produced in forms of cabinet or frame. The equipments use vacuum contactor or vacuum breaker & reactive voltage auto-control equipment to control the capacitor bank, in this way, the capacitor bank will be auto-switched.

During the switching on/off of shunt capacitor banks in substations, vacuum circuit breakers (VCBs) are required to switch off or to switch on the capacitive current. Therefore, the VCBs have to be operated under a harsh condition to ensure the reliability of the equipment. This study presents a complete comparison study of ordinary and phase-controlled VCBs on switching 10 ...
