Battery and Power Supply Battery and Power Supply. If an EZB microcontroller is often disconnecting, the batteries or power source is not providing enough current for the servos. When this happens, it is called a "Brown Out." That means the EZB controller is not getting enough power when the servos move. In this case, the solution is to replace ...

In addition to the power supply voltage, loop current, and circuit load in the equivalent circuit, the factors affecting the V-I curve also included electrode material and shape, environmental conditions (temperature, humidity, and pressure), and arc length. In Fig. 6 (a), the V-I curve increases as the arc length increases [9]. The transition point divides the arc's V-I ...
