Lead-acid batteries are the cheapest and come with the shortest lifespan and capacity. These are a good option if users want to have a battery storage system on a budget. However, these batteries prove to be costly in the long run because users need to replace them more frequently.

Batteries. Batteries allow you to store electricity from micro-generation so you can use it later. Banks of 12 V to 48 V lead-acid batteries are most commonly used. You need to replace them every 6 to 12 years - depending on quality, size and how much they're used. You'll also need a controller and an inverter, as well as a back-up generator.

In sealed lead-acid batteries (SLA), the electrolyte, or battery acid, is either absorbed in a plate separator or formed into a gel. Because they do not have to be watered and are spill-proof, they are considered low maintenance or ...
