What are the characteristics of a film capacitor?

Film capacitors have a capacity range of 3pF-0.1uF and a DC working voltage of 63-500V. They are suitable for both high frequency and low frequency applications and have a leakage resistance greater than 10000  $\Omega$ . (Summary of characteristics: The capacity range of the film capacitor is 3pF-0.1uF, the DC working voltage is 63-500V, suitable for high frequency and low frequency, and the leakage resistance is greater than 10000  $\Omega$ .)

What kind of capacitors do we make?

jb Capacitors Company specializes in the production of plastic film capacitors and Aluminum Electrolytic Capacitors with SMD & Snap-in, Screw and Lug terminals. These capacitors are widely used in consumer electronics, data processing, telecommunication, and industrial control's equipment industry. Most of our products are exported to Europe, USA, South America, and South Africa.

How are capacitors made?

Capacitors are made with two electrical conductors, called plates, which are separated by a non-conducting insulator called a dielectric. One plate builds a positive charge while the other builds a negative charge, creating energy that is stored in the dielectric.

Which company makes film capacitors?

Sungho Electronics Co., Ltd. manufactures film capacitors. Their product line includes metallized polyester film capacitors, metallized polypropylene film capacitors, polypropylene film capacitors, and metallized polypropylene sulphide film capacitors. Sungho Electronics also produces film capacitor manufacturing equipment.
