What is battery API in JavaScript?
The Battery API in JavaScript is a useful interface that allows web developers to access and monitor the status of a device's battery. This API provides information such as battery level, charging status, and whether the device is plugged in or running on battery power.

How do I use a 9v battery?
You would connect your DC 9V source to a plug identical to the one coming out of the adapter and plug that into the power jack on the tablet. A small 9V battery is not sufficient. Your best bet would be a lithium battery. It would run fine off 3 18650 cells in series and a 9V switching regulator.

What is the battery status API?
Secure context: This feature is available only in secure contexts (HTTPS),in some or all supporting browsers. The Battery Status API,more often referred to as the Battery API,provides information about the system's battery charge leveland lets you be notified by events that are sent when the battery level or charging status change.

Can I use the battery API?
Well,you can. The Device APIs Working Group is a series of specifications drafted to provide developers with access to additional information about a user's device,so that a more tailored experience can be created. This working group contains several evolving standards,including the Battery API which we will take a look at in this tutorial.

What is a battery drain API?
This can be used to adjust your app's resource usage to reduce battery drain when the battery is low, or to save changes before the battery runs out in order to prevent data loss. Note: This API is not available in Web Workers (not exposed via WorkerNavigator). Provides information about the system's battery charge level.

Which browsers support the battery API?
While the Battery API makes the most sense for mobile devices (and their browsers), it's still important to have support for the API across the traditional browsers, as they're often used on laptops and other portable devices (where the API is useful). Firefox, again, has the longest history of support, back to version 18 (launched in 2012).

Some API calls have a single URL for GET and POST - e.g. /api/ntp/config; Other API calls use e.g. /api/limit/status to GET data and a different URL /api/limit/config to POST data. If you want to investigate the web api communication, a good tool is Postman; Settings API require username and password provided with Basic Authentication credentials

Convert device battery URL
