

# How to charge a mobile power bank with a detachable battery

How do you charge a power bank?

To charge a power bank, you can use either a wall adapter or a computer/laptop. If using a wall adapter, plug the larger end of the USB cord into it, then plug the smaller end into the power bank. If using a computer/laptop, connect the smaller end of the USB cord directly to the power bank.

How many charges can a power bank provide?

To calculate the approximate number of charges, you must first know the capacity of both the power bank and the battery in your phone. For example, if you have a 10,000mAh power bank and your phone's battery capacity is 2,500mAh, you can anticipate the power bank to last roughly four full charges before it has to be refilled.

What do you connect to a power bank?

To charge and use a power bank, you simply charge it up by plugging it into an electrical outlet, and then connect your electronic device to the power bank via a USB cable after charging of the power bank is done.

How do I use my power bank if my device doesn't support wireless charging?

Charging with a cable: If your device does not support wireless charging, you can still use the power bank by connecting it to your device with a compatible charging cable. Simply plug one end of the cable into the power bank's USB port and the other end into your device's charging port.

Can a power bank battery be overcharged?

Avoid overcharging: To prevent overcharging and maximize the lifespan of the power bank's battery, unplug it from the power source once it's fully charged. Continuous charging beyond full capacity can cause stress to the battery and affect its overall performance.

How many times can a power bank charge my phone?

The number of times a power bank can charge your phone is determined by the power bank's capacity and the battery capacity of your phone. To calculate the approximate number of charges, you must first know the capacity of both the power bank and the battery in your phone.
