

I bought a new energy battery but it broke down and I don't get any warranty

What happens if you replace a car battery?

Here's what you need to know. There can be many problems that occur after replacing a car battery: The car may not start. This can happen for many reasons. The new battery might not be charged, or the battery terminals might be loose or have corrosion preventing the flow of electrical current. There could be burning smells.

Why is my car not starting after a battery replacement?

One of the most common issues that can pop up after a battery replacement is your car refusing to start. In most cases, this usually happens due to improper installation. Turn off your ignition, and check the terminals and wires to make sure everything's in order. When it comes to cars, a burning smell is never a good sign.

What happens if you don't test a new battery before installing?

If you didn't test your old battery before installing it, and your new battery still has the car starting hard or failing to start, you might have a bad starter, a dying alternator, or a bad starter relay. If it's the relay, the car won't turn out, and you'll get a clicking noise when you turn the key.

Should I replace my car battery?

Nobody likes dealing with electrical problems after replacing their car battery, which is why it's always a good idea to be extra careful. Here are some tips on how you can safely replace your car battery: Have your car keys with you in case your alarm goes off. Use a memory saver to stop your car from erasing your current settings.

Why does my car have electrical problems after replacing the battery?

Read on to discover why your car may have electrical problems after replacing the car battery and what you can do to fix this problem. Why Won't My Car Start with a New Battery? 1. Incorrect Battery Before jumping to any major conclusions, you'll first want to verify if your new battery meets your car's size and power requirements.

What happens if you put a new battery on a starter?

A failing starter motor that was hidden by the old bad battery can be exposed when you install a new battery, only to find that the engine still struggles to turn over. In a case like this, one or more of the teeth on the starter's Bendix gear often fail to connect with the flywheel when you try to start the car.

Many small lot car dealers don't comply with the law. If they don't, then you may end up with a warranty after all and you may even have the right to cancel the sale. The back side of the form has to be completely filled out and many car lots, big and small, fail to do that too and that can also trigger your right to cancel the deal. You ...

I bought a new energy battery but it broke down and I don't get any warranty

One of the most common issues that can pop up after a battery replacement is your car refusing to start. In most cases, this usually happens due to improper installation. Turn off your ignition, and check the terminals and wires to make sure everything's in order. When it comes to cars, a burning smell is never a good sign.

These batteries stop charging upon reaching 100%, ensuring that the batteries don't get overloaded. However, it's still recommended not to charge low-power devices like Bluetooth headphones for extended periods of time. Doing so may make the batteries prone to early deterioration, especially for older models, which make use of "trickle ...

My car broke down -- and I just bought it! Posted on May 1, 2012 by admin. One of the most frequent complaints CARS gets -- "I just bought the car, and as soon as I drove it off the lot, the check engine light came on." Or "the engine blew up." Or "the transmission stopped shifting." This happens all the time. And it can be catastrophic, resulting in losing the car and ...

Some of the most common reasons why a car won't start even with a new battery are starter problems, a loose ground wire, installation issues, or even a manufacturer's defect in the battery itself. Problems with the ignition switch, serpentine belt issues, or an alternator problem could also lurk in your engine bay.

He also had got MOT, Service and break pads changed a month before I bought the car. When I bought the car, I signed a document which says that I have tested the car, there are no warranties or guarantees provided and I buy the car in current condition. I have a copy and so does he. Can I get any money from the seller towards the car?
