Optimal dispatch in power systems is a complex mathematical model of nonlinear programming with many physical constraints, which is difficult to solve by conventional methods. Thus, intelligent algorithms are now viable options for resolving the nonlinear scheduling issues of microgrids. In this paper, we propose a double-layer optimization strategy based on ...

Microgrid (MG) systems knit together consumer load and a cluster of distributed energy resources (DERs) such as diesel generators (DGs), wind turbines (WTs), PV systems as well as battery energy storage systems (BESSs). An MG system may be stand-alone or grid-connected; it helps to maintain the electricity supply in case of an outage improves the ...
