This study analysed a solar photovoltaic system integrated with a battery, also known as a solar-plus-storage system, incorporating solar modules with energy storage characteristics. This combination allows extra electricity produced by the solar module array during the day to be stored and used at night or during periods of insufficient sunlight.

Whether you should store solar batteries inside or outside depends on several factors, including the type of battery, your local climate, available space, and safety considerations. Here is a more detailed explanation of these key factors:
