What is a ceramic capacitor?

As the name suggests the ceramic capacitor is a type of non-polar capacitor in which the dielectric used is a ceramic material. It is made of two layers of metal (usually nickel and copper) with ceramic (Para electric or Ferroelectric) as the dielectric. These alternating layers are stacked together to provide high capacitance value.

Are ceramic capacitors polarized?

Ceramic capacitors are non-polarized capacitors used in applications such as filtering, coupling, decoupling, and timing. The ceramic capacitor voltage rating is fairly high and is capable of handling both DC and AC voltage. However, ceramic capacitors are usually derated while employed in circuits.

What is the value of ceramic capacitors?

The value of capacitance is 1200 uF (microfarad). The value of maximum voltage is 63 V DC. The value of tolerance is $\pm 20\%$. The value of temperature coefficient is -40 to $+105$ $^{\circ}\text{C}$. The fig 2 (d) We will show a solved example and table (see fig 3) below to show how to read the value of ceramic capacitors

How do you identify a small ceramic capacitor with 2 digits?

2 digits and nothing else = pF. $xNy = x.y \text{ nF}$. The small ceramic capacitors with 2 digits markings can be identified with their color and the type of markings: Generalizing, The small brown capacitors have written with the value of the capacitance with a multiplier $10^{(-12)}$ i.e. picofarad The capacitor with value written as $1n0,2n2,4n$ means :

The disc-type capacitors have a high capacitance per unit volume. They are available up to a value of 0.01 uF. It has voltage ratings up to 750 V D.C. and 350V concerning A.C.. Multilayer Ceramic Capacitor. Multilayer ceramic capacitors (MLCCs) are made of several layers of ceramic material, usually barium titanate, separated by metal electrodes.

Applications of different ceramic capacitor types. The versatility of ceramic capacitors, along with their compact size and cost-effectiveness, makes them essential components in a wide range of electronic devices and systems. These components are commonly used in the following applications: Decoupling and bypassing: ceramic capacitors help stabilize ...
