Are new battery technologies a good idea?

The biggest concerns -- and major motivation for researchers and startups to focus on new battery technologies -- are related to safety, specifically fire risk, and the sustainability of the materials used in the production of lithium-ion batteries, namely cobalt, nickel and magnesium.

Are lithium-ion batteries the future of battery technology?

Because lithium-ion batteries are able to store a significant amount of energy in such a small package, charge quickly and last long, they became the battery of choice for new devices. But new battery technologies are being researched and developed to rival lithium-ion batteries in terms of efficiency, cost and sustainability.

Are new battery technologies reinventing the wheel?

But new battery technologies are being researched and developed to rival lithium-ion batteries in terms of efficiency, cost and sustainability. Many of these new battery technologies aren't necessarily reinventing the wheel when it comes to powering devices or storing energy.

What's going on in the battery industry?

From more efficient production to entirely new chemistries, there's a lot going on. The race is on to generate new technologies to ready the battery industry for the transition toward a future with more renewable energy. In this competitive landscape, it's hard to say which companies and solutions will come out on top.

How a battery manufacturing industry is transforming the energy storage industry?
