

# Voice-controlled compression bag battery installation price

How long does it take to charge a battery pack?

By design, fast battery pack swapping, as well as external AC power adapter operation, is possible. An optional charging station can charge up to two battery packs simultaneously and independently: recharge one depleted battery pack in 2 hours, or two depleted battery packs in 3 hours.

What is a compression module?

The Compression Module contains the Control Panel, a removable and rechargeable battery pack, and the piston drive used to generate the chest compressions. Modularization of the Compression Piston has benefits in all phases of use, particularly during deployment and repacking.

What is a compression control unit?

Control Unit: The heart of the compression system, designed for ease of use and maximum efficiency.  
Power Supply: Ensures your device is always charged and ready for your recovery needs.  
Hose: Seamlessly connects the control unit to each attachment, ensuring a holistic compression experience.
