Up to two thirds less greenhouse gas emissions arise in the production of a steel battery housing compared with an aluminum design. During use, the carbon footprints of steel and aluminum battery housings are virtually identical. Over the full life cycle, however, the use of steel in place of aluminum can save around 50% CO<sub>2</sub> emissions.\*

En partenariat avec le Chinois Huayou, le Sud-Coréen LG Chem a annoncé l'installation de deux usines au Maroc pour la production de cathodes LFP et la conversion de lithium, des composants essentiels dans la fabrication de batteries pour véhicules électriques.
