

What should I do if the battery still has current when it is flattened

What if I have a flat battery?

Just call us on 03330 046 046. We provide 24/7 roadside assistance. If you've got a flat battery, we won't just jump-start you and send you on your way. As well as charging or replacing your battery, we'll try to find out why it went flat in the first place.

What should I do if my BMS battery goes flat?

If the battery does completely go flat and the BMS enters sleep mode, please use the guide on the below link to restart your battery. Download PDF or you can watch this great video, that shows you in depth how to jumpstart your battery.

What causes a flat battery?

A flat battery can be caused by a range of things: short journeys (particularly if you have the lights/radio/heater/aircon on); underuse; age. There are few things more embarrassing than calling for vehicle help only to realise that it is operator error. Check your fuel first (particularly if it has been a while since you have driven).

Can a flat battery make a full recovery?

Being able to restore the charge in a flat battery will depend on the overall condition of the battery at that point in time and also what caused it to lose charge. If it is already two or three years old, you might have trouble getting it to make a full recovery.

How do I know if my car has a flat battery?

Here's how to tell if you have a flat battery and what to do: 1. Double check that it's a flat battery Make sure there's fuel in the tank. If the central locking isn't working, your key fob might have died so try a spare key. If you can't turn the ignition, check the wheels aren't jammed against the kerb. Check your dashboard warning lights.

What can I do if my car battery dies?

What can you do if your car battery dies? A common reason for a dead car battery is that it's been drained by the lights being left on, without the engine running. If your battery hasn't completely discharged, you may be able to charge it using a car battery charger that plugs into the mains.

What should I do if my electric car battery goes flat? If your electric car battery goes flat, you should contact a professional technician to come and recharge or replace the battery. Avoid attempting to jump-start the car yourself as you may damage the battery or the car's electrical system.

First try fully charging the battery, removing it from the device and then testing it after whatever time period it

What should I do if the battery still has current when it is flattened

usually runs flat. If the battery remains fully operational it is a parasitic electrical drain somewhere that needs to be rooted out. In larger appliances a multi-meter can help you track down the circuit which is drawing power ...
